

City of Sunnyvale Planning Department

File number
2006-0078

On March 2, 2006, the administrative hearing the approval for installation of an outside repair hoist, with the contingency of installing a 15' tall brick or concrete wall to hide the hoist if a vehicle was on it in the up positing

The outside hoist will only be used during work hours and safety requires it to be lowered when not in use (after working hours)

The purpose of this hoist is to allow us the ability to service trucks that many business's in this area use daily / gardeners / delivery vehicles / city trucks ect. Who are currently going outside the city for service.

The installation of this wall would become quite costly and require engineering to install, If required by the planning department, My Recommendation would be to allow, use of chain link fence with colored (natural colored) slats
